

230 AUTHORIZED ACCESS POINT – TITLE

Field Definition and Scope

Preferred form of a title.

A name/title access point is intended to be used to bring together different titles of a work.

It is formulated in accordance with the cataloguing rules or subject system in use by the agency which created it.

This field does not comply with the FRBR/IFLA LRM model. If a title intended for catalogues that comply with the FRBR/IFLA LRM structure and entities is desired, use fields -31 (entity “work”) or -32 (entity “expression”) instead.

The subfields forming the base access point that identify the title are \$a, \$i, and \$h. Qualifying data are recorded in subfields from \$b to \$w.

Note that a record describing a title entity has the value “f” in record label, position 9 (type of entity).

Repeatable for alternative script forms.
